

Capstone Project Weekly Progress Report

Project Title	MEALBUDDY
Group Name	GROUP_G
Student names/Student IDs	ELVIN IYPE MATHEW C0769974 ELDA VARGHESE C0769741 TOM JOSEPH C0760915 JEENA HELEN FRANCIS C0764493 CHINJU BABY C0769912
Reporting Week	28 JUNE 2020 - 04 JULY 2020
Faculty Supervisor	WILLIAM POURMAJIDI

1. Tasks Outlined in Previous Weekly Progress Report

- SQS-LAMDA (LF2) INTEGRATION - Create a new Lambda function (LF2) that acts as a queue worker. Whenever it is invoked it pulls a message from the SQS queue (Q1).
- LF2 - elastic search and dynamo db integration study
- LEX - LF1 - SQS flow check
- Explore <https://aws.amazon.com/amplify/> and <https://www.kommunicate.io/>

2. Progress Made in Reporting Week

- Created Lambda function named LF2 to receive messages from SQS 'LF1SQSLF2' whenever it is invoked. Lambda pulls the message using the function `sqs.receive_message` and retrieves all the parameters. <https://github.com/tom5167/mealbuddy/tree/master/LAMBDA/LF2>
- Successfully integrated LEX-LF1-SQS for a sample data and received the required output.
- AWS Amplify is a set of tools and services that enables mobile and front-end web developers to build secure, scalable full stack applications, powered by AWS. With Amplify, it's easy to create custom onboarding flows, develop voice-enabled experiences, build AI-powered real-time feeds, launch targeted campaigns, and more. No matter the use case, AWS Amplify helps you develop and release great apps your customers will love. AWS Amplify includes an open-source framework with use-case centric libraries and a powerful toolchain to create and add

cloud-based features to your app, and a web hosting service to deploy static web applications.
<https://aws.amazon.com/amplify/>

- **Kommunicate gives you the power to integrate any third-party or custom chatbot in your platform. Be there where your customers are with Chatbots that are compatible on all platforms; website, mobile, web apps and more.**
 - **Welcome Messages - Create custom and conditional Welcome Messages to greet your visitors automatically.**
 - **Push Notifications - Set up interactive alerts for both your agents and customers for new messages in conversations.**
 - **Customization - Add your brand identity and color, and customize the chat widget to make it your own.**
- **So I finally decided to go with Kommunicate which is easier to set up, less coding involved and save our time. Even though there is a FREE plan available, I would like to go with a GROWTH plan which has Bot integration and more features.** <https://www.kommunicate.io/pricing>
 - **Everything in FREE Plan**
 - **Monthly \$20**
 - **Includes 2 teammates. \$10 for each additional teammate**
 - **Unlimited bots**
- **Kommunicate is GDPR compliant which makes it more secure.**
- **Created a lambda function called SQStest (Works as a queue worker)to pull message from the SQS(Simple Queue Service).**
<https://github.com/tom5167/mealbuddy/blob/master/LAMBDA/LF2/LF2.py>

- **To configure Lambda function triggers using the console, you must ensure the following:**

If you use an IAM user, your Amazon SQS role must include the following permissions:

- **lambda:CreateEventSourceMapping**
- lambda:ListEventSourceMappings**
- lambda:ListFunctions**

Your Lambda role must include the following permissions:

- sqs:DeleteMessage
- sqs:GetQueueAttributes
- sqs:ReceiveMessage
- From Queue(LF1SQSLF2) Actions, select Configure Trigger for Lambda Function.
- In SQSTest define URL for SQS queue

```
response = sqs.get_queue_url(QueueName='LF1SQSLF2.fifo')  
queue_url = response['QueueUrl']
```

- **Receive a message from SQS queue**
 - QueueUrl (string) :The URL of the Amazon SQS queue to which permissions are added.
 - AttributeName.N:A list of attributes that need to be returned along with each message
 - All – Returns all values.
- **Response Elements**

The following element is returned by the service

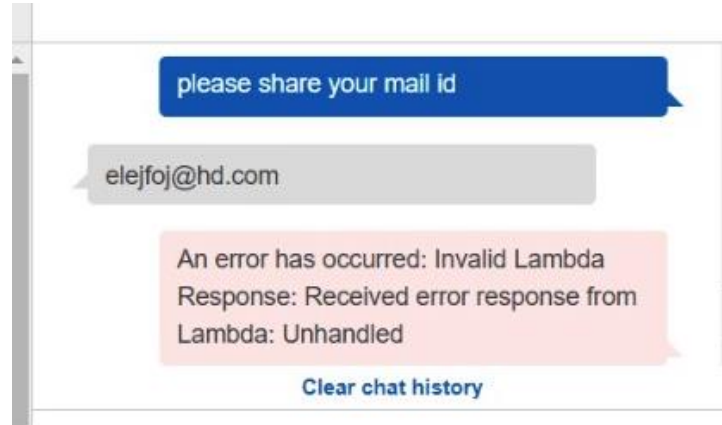

-Message.N

-A list of messages.

-Type: Array of Message objects

3. Difficulties Encountered in Reporting Week

- While integrating Lex chat bot with the Lambda LF1 Following error occurred in chat bot and the SQS message contained null values.

- This issue was due to variable name mismatch in Lex and LF1.
- Since response from sqs is a Nested JSON and in python it appears as a Dictionary with keys and values. Dictionary contains keys and values in string, but expected in json

```

Execution results
Status: Succeeded Max Memory Used: 73 MB Time: 1205.32 ms

2020-06-25T14:34:53.470Z b663c21b-cc13-485c-b905-a2153cde4609 No retry needed.
2020-06-25T14:34:53.470Z b663c21b-cc13-485c-b905-a2153cde4609 sqs response :
2020-06-25T14:34:53.470Z b663c21b-cc13-485c-b905-a2153cde4609 {'MessageId': 'c97e1511-d3c6-491d-846e-d91170a932e6', 'ReceiptHandle': 'AQE8500A611Hu5Zqwa8JrKiqlxypQ0mbGxxsEXDkDbvtIe2EeNIG4UTHiNkVhUzGI

2020-06-25T14:34:53.470Z b663c21b-cc13-485c-b905-a2153cde4609 Error:- An exception of type KeyError occurred. Arguments:
ph',)}
RequestId: b663c21b-cc13-485c-b905-a2153cde4609
RequestID: b663c21b-cc13-485c-b905-a2153cde4609 Duration: 1205.32 ms Billed Duration: 1300 ms Memory Size: 128 MB Max Memory Used: 73 MB Init Duration: 325.19 ms

```

Solution:Change the Key's values into json format again

4. Tasks to Be Completed in Next Week

- LF2 query from dynamo db
- LF2 SNS for sending message notification to cell phone
- Test Case Document for various test case scenarios
- LEX - LF1 - SQS- LF2 flow check and resolve issues if any
