Yelp Developers

/businesses/{id}

This endpoint returns detailed business content. Normally, you would get the Business ID from </businesses/search>, </businesses/search/phone>, /transactions/{transaction_type}/search or </autocomplete>. To retrieve review excerpts for a business, please refer to our Reviews endpoint (</businesses/{id}/reviews>)

Note: at this time, the API does not return businesses without any reviews.

Request

```
GET https://api.yelp.com/v3/businesses/{id}
```

Parameters

Name	Type	Description
locale	string	Optional. Specify the locale into which to localize the business information. See the list of supported locales . Defaults to en_US.

Response Body

```

```

Name	Type	Description
categories	object[]	A list of category title and alias pairs associated with this business.
categories[x].alias	string	Alias of a category, when searching for business in certain categories, use alias rather than the title.
categories[x].title	string	Title of a category for display purpose.
coordinates	object	The coordinates of this business.

Name	Type	Description
coordinates.latitude	decimal	The latitude of this business.
coordinates.longitude	decimal	The longitude of this business.
display_phone	string	Phone number of the business formatted nicely to be displayed to users. The format is the standard phone number format for the business's country.
hours	object[]	Opening hours of the business.
hours[x].is_open_now	boolean	Whether the business is currently open or not.
hours[x].hours_type	string	The type of the opening hours information. Right now, this is always REGULAR.
hours[x].open	object[]	The detailed opening hours of each day in a week.
hours[x].open[x].day	int	From 0 to 6, representing day of the week from Monday to Sunday. Notice that you may get the same day of the week more than once if the business has more than one opening time slots.
hours[x].open[x].start	string	Start of the opening hours in a day, in 24-hour clock notation, like 1000 means 10 AM.
hours[x].open[x].end	string	End of the opening hours in a day, in 24-hour clock notation, like 2130 means 9:30 PM.
hours[x].open[x].is_overnight	boolean	Whether the business opens overnight or not. When this is true, the end time will be lower than the start time.
id	string	Unique Yelp ID of this business. Example: '4kMBvIEWPxWkWKFN__8SxQ'
alias	string	Unique Yelp alias of this business. Can contain unicode characters. Example: 'yelp-san-francisco'. Also see: What's the difference between the Yelp business ID and business alias?
image_url	string	URL of photo for this business.
is_claimed	bool	Whether business has been claimed by a business owner
is_closed	bool	Whether business has been (permanently) closed
location	object	The location of this business, including address, city, state, zip code and country.
location.address1	string	Street address of this business.
location.address2	string	Street address of this business, continued.
location.address3	string	Street address of this business, continued.
location.city	string	City of this business.
location.country	string	ISO 3166-1 alpha-2 country code of this business.
location.cross_streets	string	Cross streets for this business.
location.display_address	string[]	Array of strings that if organized vertically give an address that is in the standard address format for the business's country.
location.state	string	ISO 3166-2 (with a few exceptions) state code of this business.
location.zip_code	string	Zip code of this business.

Name	Type	Description
messaging	object	Contains Business Messaging / Request a Quote information for this business. This field only appears in the response for businesses that have messaging enabled.
messaging.url	string	Action Link URL that drops user directly in to the messaging flow for this business.
messaging.use_case_text	string	Indicates what kind of messaging can be done with the business, for example "Request a Quote" for a home services business, or "Request a Consultation" for a legal services business. This text will be localized based on the "locale" input parameter.
name	string	Name of this business.
phone	string	Phone number of the business.
photos	object[]	URLs of up to three photos of the business.
price	string	Price level of the business. Value is one of \$, \$\$, \$\$\$ and \$\$\$\$.
rating	decimal	Rating for this business (value ranges from 1, 1.5, ... 4.5, 5).
review_count	int	Number of reviews for this business.
url	string	URL for business page on Yelp.
transactions	string[]	A list of Yelp transactions that the business is registered for. Current supported values are "pickup", "delivery", and "restaurant_reservation".
special_hours	object[]	Out of the ordinary hours for the business that apply on certain dates. Whenever these are set, they will override the regular business hours found in the 'hours' field.
special_hours[x].date	string	An ISO8601 date string representing the date for which these special hours apply.
special_hours[x].is_closed	boolean	Whether this particular special hour represents a date where the business is closed.
special_hours[x].start	string	Start of the opening hours in a day, in 24-hour clock notation, like 1000 means 10 AM.
special_hours[x].end	string	End of the opening hours in a day, in 24-hour clock notation, like 2130 means 9:30 PM.
special_hours[x].is_overnight	boolean	Whether the special hours time range spans across midnight or not. When this is true, the end time will be lower than the start time.
attributes	object	<p>A mapping of attribute names, such as "Ambience" or "Good for Kids", to values. This field will only be visible for Fusion VIP clients granted access to certain attributes.</p> <p>If you have a clear and compelling use case in mind for additional business attributes, feel free to apply for Yelp Fusion VIP. We can't guarantee approval, but can promise that we love great and original ideas.</p>

Other Responses

HTTP 301 (Business Migrated)

Sometimes duplicate business listings are created on Yelp, and when this occurs these 'source' businesses will all be merged into a single business. Making a request for a merged source business will return a 301 Moved Permanently response where the JSON response body contains the new business ID to access instead. In addition, the response's 'location' is set to the appropriate URL to request business details for the new business ID.

Response Body:

```
{
  "error": {
    "code": "BUSINESS_MIGRATED",
    "description": "The requested business has been permanently migrated. Please access the new business ID.",
    "new_business_id": "gezgzYZ16YVGnCcFvy6WQ"
  }
}
```
